

6 B

Taking moments about the pivot,

$$W_{\text{wood}}(0.900L) = W_{\text{rubber}}(1.60L)$$

$$[\rho_{\text{wood}}(4.00L)(A)g](0.900L) = [\rho_{\text{rubber}}(L)(A)g](1.60L)$$

$$\rho_{\text{wood}}(4.00)(0.900) = \rho_{\text{rubber}}(1.60)$$

$$\frac{\rho_{\text{rubber}}}{\rho_{\text{wood}}} = \frac{4.00(0.900)}{1.60}$$

$$= 2.25$$
