

26	Answer: C
	Magnetic flux, $\phi = BA$ (where A is the area exposed to perpendicular B-field) At 4s, Q and R are entirely within the field while coil P has length of 4.0 m within. $\phi_P = 8B$; $\phi_Q = 6B$; $\phi_R = 12B$ (largest) Magnetic flux linkage, $\Phi = N\phi$ $\Phi_P = 8B$; $\Phi_Q = 18B$ (largest); $\Phi_R = 12B$ At 4s, coils Q and R would be experiencing maximum flux linkage. Hence no change in flux linkage $\Rightarrow$ no induced e.m.f. and no induced current. Only coil P has changing flux linkage, induced e.m.f. and current.

27	Answer: A
