

6	Answer: B
	Let d be the initial height from ground, h be the height at t. For E_P-s graph, $E_P = mgh$ $= mg(d-s) \Rightarrow$ Sketch $y = b - cx$ (where b, c are constants) For E_P-t graph, $E_P = mgd - mgs$ $= mgd - mg(ut + \frac{1}{2}gt^2)$ $= mgd - \frac{1}{2}mg^2t^2 \Rightarrow$ Sketch $y = p - qx^2$ (where p, q are constants)
