

		amplitude would correspond to λ . Hence, the correct answer is $\frac{1}{2} \frac{1}{\lambda}$.
18	B	Reading from the graph, a distance on the screen of 1.10 mm corresponds to a phase difference of $3.5 \times 2\pi$ radians. Since point P is 0.70 mm away from the central maximum, the phase difference there is $(0.70 / 1.10) \times (3.5 \times 2\pi) = 14.0$ radians. The reduced phase difference (i.e., modulo 2π , to get a value between 0 and 2π radians) is $14.0 - 4\pi = 1.4$ radians.
19	C	Option A is the definition of electric potential not electric field strength.
