

Original weight.

- 5 C The weights W_1 and W_2 provide the tension forces, balancing the weight of the object in equilibrium. Drawing a vector triangle of proportional magnitudes:

Recognize it is a 6-8-10 right-angled triangle. (similar to a 3-4-5).

Analysing the horizontal components in equilibrium:

$$6.0 \cos \theta_1 = 8.0 \cos \theta_2 \Rightarrow \theta_1 < \theta_2$$

Thus, $W_1 = 6.0 \text{ N}$, $W_2 = 8.0 \text{ N}$
