

		$T = 188.8 \text{ K} = -84.4 \text{ }^{\circ}\text{C}$
13	A	Total heat supplied by the potatoes = heat for calorimeter + heat for water $= C\theta + mc\theta$ $= 200 \times 12 + (2000) \times (4.18) \times 12$

		$= 102720 \text{ J}$ Hence heat supplied per gram of potato = $Q/m = 102720/75 = 1369.6 \text{ J per gram}$
