

		$= 0.0080 \text{ V}$
26	B	On the secondary side, $I_{S \text{ rms}} = \frac{\langle P \rangle}{V_{S \text{ rms}}} = \frac{12}{6.5} = 1.8462 \text{ A}$ There using $\frac{I_P}{I_S} = \frac{N_S}{N_P}$ $I_{P \text{ rms}} = \frac{40}{1000} \times 1.8462 = 0.0738 = 0.074 \text{ A}$
27	C
