

		$= 4.14 \text{ eV}$
29	D	Total BE before reaction = $7.59 (235) = 1783.65 \text{ MeV}$ Total BE after reaction = $(8.26 \times 121) + (8.52 \times 113) = 1962 \text{ MeV}$ Change in BE = $+179 \text{ MeV}$, manifested as the energy released (products are more stable)
30	C	For example Y: $A = 234$
