

		The spring balance will read $= 8.0 - 1.6 = 6.4 \text{ N}$
7	B	By conservation of energy, Loss in GPE = Gain in KE + W.D by resistive force $(600)(80 - h)(9.81) = [\frac{1}{2} (600)(12.0)^2 - 0] + (200)(1500)$ $h = 22 \text{ m}$
8	C	The resultant of 160 N and 120 N should provide the horizontal centripetal force
