

		$h = 22 \text{ m}$
8	C	The resultant of 160 N and 120 N should provide the horizontal centripetal force. Resultant force = $\sqrt{160^2 - 120^2} = 105.8 \text{ N}$ Resultant force = ma $105.8 = (120/9.81) a \Rightarrow a = 8.65 \text{ ms}^{-2}$
9	D	$GM = \omega^2 r$
