

- 17 A positive charge is placed at P and a negative charge is placed at Q. The electric potential at different points between these two charges is shown in the figure below.

Which of the following graphs correctly shows the variation of the electric field strength E with distance x along line PQ?

- | | | |
|----|---|---|
| 17 | A | Field strength E of the field at a point is numerically equal to the potential gradient at that point.
As the equipotential lines are closer at the two ends, the potential gradient is steeper at these regions, i.e. a stronger E field. |
|----|---|---|

18 W, X, Y and Z are four points on a square as shown
