

- 22** In a constant flow determination of the specific heat capacity of a liquid, it is important to allow for any heat losses.

What conditions are required when repeating the experiment?

- A** same temperature, heat input and flow rate
- B** same temperature but different heat inputs and flow rates
- C** same temperature and flow rate but different heat inputs
- D** same flow rate but different temperatures and heat inputs

22	B	Only same temperatures are required to ensure rate of heat loss is the same
