

17	A	acceleration of the body.
18	D	Diagram illustrating wave motion. The solid line represents the 'original waveform' and the dashed line represents the 'waveform after a short instant'. The dashed line is shifted to the left, indicating wave propagation. Point P is on the solid line at a zero-crossing with a blue arrow pointing up. Point Q is at a peak of the solid line. Point R is on the solid line at a zero-crossing with a blue arrow pointing down. Since Q is at maximum displacement, it should have zero speed. To check the movement of P and Q, draw the waveform at a short instant later. From the diagram, we can see that P is moving upwards while R is moving downwards.
