

			= 9.0 cm
7	B	Additional energy stored in spring = $\frac{1}{2} \times 181 \times (0.036^2 - 0.021^2) = 0.07738 \text{ J}$ loss in GPE = $3.8 \times (0.178 - 0.163) = 0.057 \text{ J}$ Hence, work done by force = $0.07738 - 0.057 = 0.0204 \text{ J}$ Option C distractor if student did not subtract GPE from the EPE	
8	D	Let driving force by the car be F , so Newton's second law gives
