

The mass slowed down at an increasing rate from $t = 0.25$ s to $t = 0.50$ s

6 Ans: A

Clockwise moment by weight of M = anticlockwise moment by tension in string

$$Mg(1.200) = 300 \sin 30^\circ (0.805)$$

$$M = 10.3 \text{ kg}$$

7 Ans: C
