

3. **Ans: C**

At time t :

$$s = ut + \frac{1}{2}at^2$$

$$x = \frac{1}{2}gt^2$$

At time $2t$:

$$\begin{aligned} s &= u(2t) + \frac{1}{2}g(2t)^2 \\ &= \frac{1}{2}g(2t)^2 = 4\left(\frac{1}{2}gt^2\right) = 4x \end{aligned}$$

Hence distance fall in 2nd time interval $t = 4x - x = 3x$

1 Ans: B
