

the right with the same speed.

7. Ans: D

Force exerted by the motor, $F = 40 - 25 = 15 \text{ N}$

Output power of motor, $P = F v$, where v is speed of rotation (at circumference) of wheel.

Hence $P = 15 [2\pi(0.080) \times 10 / 1] = 75 \text{ W}$

8. Ans: D
