

		width of central maximum = $2\lambda = 2 \times 0.00006 = 0.0012 \text{ m} = 1.2 \text{ mm}$
17	C	Since Q experiences no net force, Force on Q by 4.0 C = Force on Q by 9.0 C $\frac{4.0Q}{(1-x)^2} = \frac{9.0Q}{x^2}$ $\frac{x^2}{(1-x)^2} = \frac{9}{4}$ $x = 0.60 \text{ m}$
18	B	Since the charge is held stationary, net force on the oil drop = 0
