

		Action and reaction pair will be forward push by road on the back wheel
4	A	Looking at FBD of whole system $\Sigma F = ma$ $(5)(9.81) - (2)(9.81) \sin 30 - 7.0 = 7a$ $a = 4.61 \text{ m s}^{-2}$ Looking at FBD of 5.0 kg block, $\Sigma F = ma$ $(5)(9.81) - T = 5(4.61)$ $T = 26 \text{ N}$
5	B	The bar is in equilibrium and the load (weight = W) is a constant
