

25	$B_S = \mu_0 n I = 4\pi \times 10^{-7} \times 15 \times 0.20$ $B_C = \frac{\mu_0 N I}{2r} = \frac{4\pi \times 10^{-7} \times 0.90}{2 \times 1.6}$ $B_{resultant} = B_S - B_C = 3.4 \times 10^{-6} \text{ T}$
26	E.m.f. is induced in the part of the length of the rod that forms a closed loop with the square. This length first increases then decreases, thus the e.m.f. induced will first increase then
