

$$1 = p - q \rightarrow q = -\frac{1}{2}$$

3

$$s = ut + \frac{1}{2}at^2$$

Considering first 2 points: $9.0 = u(3.0) + \frac{1}{2}a(3.0)^2 \dots (1)$

Considering first and third points: $21.0 = u(6.0) + \frac{1}{2}a(6.0)^2 \dots (2)$

$$(2) - 2 \times (1) : 3.0 = \frac{1}{2}a[(6.0)^2 - 2(3.0)^2]$$
