13	A	Frictional force provides for centripetal force towards centre of circle.
14	B	Loss in GPE = Gain in KE $mgh = \frac{1}{2}mv^2$ $v = \sqrt{2gh}$ At bottom of loop,

		$N - mg = \frac{mv^2}{R}$ $N = mg + \frac{mv^2}{R}$ $= mg + m\left(\frac{2gh}{R}\right)$ $= mg\left(1 + \frac{2h}{R}\right)$
15	**C**	There will be a point between the 2 masses where $F_{net} = 0$ on the third mass: $\lvert F_{+} \rvert = \lvert F_{-} \rvert$ and are in opposite directions.
