18	**A**	Using Malus' law, After first polariser, intensity $= \frac{I}{2}$ After second polariser, intensity $= \frac{I}{2}\cos^2 10^\circ$ After third polariser, intensity $= \frac{I}{2}\cos^2 10^\circ = \frac{1}{2}\cos^2 10^\circ \cos^2\theta = \frac{I}{3}$ where θ is angle between axes of polarisation of second and third filters $\Rightarrow \theta = 34^\circ$
19	**D**	$d\sin\theta = n\lambda$
