For R, there is a net force vertically upwards, but no net torque ⇒ not in equilibrium

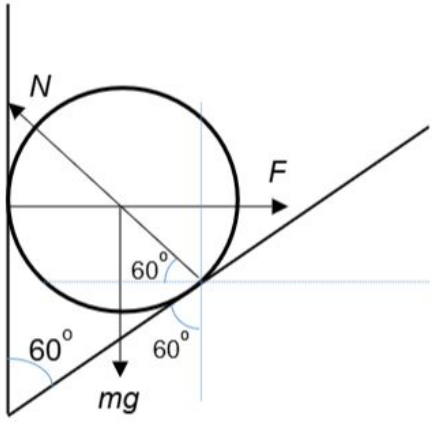
**4** B

Vertically,

$N \sin 60^\circ = mg$ .....*(1)*

Horizontally,

$N \cos 60^\circ = F$ ..... *(2)*



(2) / (1) we have,

$F/mg = \cot 60^\circ$

$F = mg \cot 60^\circ$

$= 1.5\ (9.81) \cot 60^\circ$

$= 8.5$ N
