3	(a)	It has a constant vertical acceleration and a constant horizontal velocity.	B1
	(b)(i)	Vertical component of velocity at P $= 8.2 \tan 60^\circ = 14.2 \text{ m s}^{-1}$	C1
		Using $v = u + at$ $14.2 = 0 - 9.81\,t$ $\Rightarrow \quad t = 1.45 \text{ s}$	A1
	(b)(ii)	$x = u_x t = 8.2 \times 1.45 = 11.9 \text{ m}$	A1
	(c)	Displacement is the shortest distance (or straight-line distance) from top to point P,	C1
		so it is less than the distance along the curved path	A1
	(d)(i)	Smooth curved path above given path, and	A1
		Hit ground at a more acute angle	A1/2
	(d) (ii)	Smooth curved path below given path, and	A1
		Hit ground at steeper angle	A1/2
