11	**Ans: D**

	$E_T = ½\ m\ \omega^2\ x_o^2$ $E_K = ½\ m\ \omega^2\ (x_o^2 - x^2) = ½\ m\ \omega^2\ [x_o^2 - (x_o/2)^2] = ¾\ E_T$ Since $E_T = E_K + E_P$ $E_P = ¼\ E_T$
