20	**Ans: B** Current depends on the motion of both positive and negative charges. Total charge flowing past a point in 1 minute $Q = 1.5 \times 10^{15} \times 1.6 \times 10^{-19} + 4.4 \times 10^{15} \times 1.6 \times 10^{-19}$ $= 9.44 \times 10^{-4}$ C Total current = $\frac{Q}{t} = \frac{9.44 \times 10^{-4}}{60} = 1.57 \times 10^{-5} \approx 16\ \mu$A
