4	**Ans: D** Change in momentum of the mass in the direction XY $= (0.40)(0.080 \sin 60° - (-0.080 \sin 60°)) = 0.0554$ kg ms^{-1} Average force = change in momentum / time = 0.0554 / 0.20 = 0.28 N

5	**Ans: A**
