Qn	Answer	Explanation
1	B	*A:* $v = f\lambda$ $3 \times 10^8 = f \times 10$ $f = 3 \times 10^7$ Hz (incorrect) *B:* $KE = \frac{1}{2} mv^2 = \frac{1}{2} \times 80 \times 5 \times 5 = 1000$ J = 1 kJ. (correct) *C:* *mass of an atom* = $A \times u$ = (1 to 200) × 1.66×10^{-27} = 2×10^{-25} kg (incorrect) *D:* $p = mv = 1000 \times 12 = 12\,000 = 1.2 \times 10^4$ kg m s^{-1} (incorrect)
2	D	When drawing vector triangles, the resultant force of D is zero while the rest of the
