		D: False. Being at the same temperature, the internal energy per atom is the same.
20	**A**	Amount of charge, Q that flowed during the lightning flash = It $Q = CV \Rightarrow It = CV \Rightarrow V = It / C$ where V is the reduction in p.d. between cloud and Earth. For parallel plate system, $E = V/h$ Thus, reduction in electric field strength = It / Ch
21	**D**	For steady current, power dissipated in resistor = I^2R
