		$E = \frac{hf}{t} = \frac{hc}{(6.63\times10^{-34})(3.0\times10^{8})}$
28	**A**	Find min Δp: $\Delta x \Delta p \approx h$ $\Delta p \approx \frac{6.63\times10^{-34}}{1.3\times10^{-7}} = 5.1\times10^{-27}$ N s Since direction of Δx is vertical, the direction of Δp must also be vertical.
29	**C**	When $\frac{\text{number of tin-124 nuclei}}{\text{number of tin-112 nuclei}} = 10$, this means the ratio
