

1	
(a)	Random errors: Above and below true value / no fixed pattern / different sign Systematic errors: Above or below true value / with a fixed pattern / same sign
	Random errors: Different magnitude / amount Systematic errors: Same magnitude / amount
(b)(i)	$T = 1.41923 \text{ s}$
	$\pm \Delta T = \pm 0.01008$
	$T = 1.42 \pm 0.01 \text{ s}$
(b)(ii)	There is error due to human reaction time, large number of oscillations will reduce the effect of the (absolute) uncertainty on the calculation of T .
(b)(iii)	• Uneven radius of the Earth • Non-uniform density of the Earth (circulating magma current in the Earth core)
