

electric force in the direction opposite to that of the electric field.

21

Ans : A

For uniform electric field, $E = \frac{V}{d}$

$$F_E = qE$$

$$W = qE = q(V/d)$$

$$= (4.8 \times 10^{-19})(660)/(0.015)$$

$$= 2.1 \times 10^{-14} \text{ N}$$
