

24	Ans: C To find r.m.s. value of V, we need to square the graph and find the average value of V^2 then find square root. $V_{\text{r.m.s.}} = \sqrt{\frac{(4^2 \times 1) + (1 \times 3)}{5}} = \sqrt{3.8}$ Power dissipated = $V_{\text{r.m.s.}}^2 / R = 3.8 / 2.0 = 1.9 \text{ W}$
25	Ans: C
