

- 51.2

3

Ans: D

Taking upward direction as positive, $s_y = 0 + \frac{1}{2}a_y t^2$

$$a_y = \frac{2s_y}{t^2} = \frac{2 \times 60}{10^2} = 1.2 \text{ m s}^{-2}$$

Upward force – weight = ma

Upward force = $ma + \text{weight} = m(a + g) = 5.0(1.2 + 9.81) = 55.05 \text{ N}$

upward force by air

helicopter

weight

4

Ans: A
