

	Hence the force will increase positively.	
--	---	--

13 L2	Solution: B Since phase difference of $\frac{\pi}{2}$ at distance 60 cm apart, the wavelength = $60 \times 4 = 240 \text{ cm} = 2.40 \text{ m}$ speed = $f \lambda = 200 \times 2.40 = 480 \text{ m s}^{-1}$	
------------------------	--	--

14	Solution: A
