

	λ_1 and λ_2 is only dependent on the target.	
28 L2	Solution: D Minimum energy of the electrons $= hc/\lambda_1 + hc/\lambda_2$ $= 1.44 \times 10^{-18} \text{ J}$ Since $E = qV$ $\Rightarrow V = E/e$	

	$= 1.44 \times 10^{-18} / 1.6 \times 10^{-19}$ $= 9 \text{ V}$	
--	--	--

29	Solution: C
