

		(final flux linkage = zero)
24	C	From the perspective of the copper disc, the magnet seems to rotating so by Lenz's law, in order to 'oppose' the change (which in this case is the rotation of the magnet), the disc will tend to rotate in the same direction as the magnet (so that the magnet will appear 'stationary' from the disc's perspective)
25	D	Since transformer has turns ratio of 2, secondary voltage is 240V
