13 A plane polarized light wave of intensity I_0 is incident normally on a polarising filter. The initial intensity of the transmitted wave is 0.

A second polarising filter is then inserted between the source and the first filter. Its transmission axis is at 40° to the transmission axis of the first filter, as shown.

What is the intensity of the transmitted wave from the filter combination?

A 0 **B** $0.24I_0$ **C** $0.34I_0$ **D** $0.41I_0$
