20 A thundercloud and the Earth's surface may be regarded as a pair of charged parallel plates separated by a distance h as shown in the diagram. The capacitance of the system is C.

What is the reduction in the electric field strength between the cloud and Earth when a lightning flash of mean current I and time duration t occurs?

A $\frac{It}{Ch}$ **B** $\frac{I}{Ch}$ **C** CIt **D** $\frac{CIt}{h}$
