

- 17 A region of electric field is represented by the electric field lines shown below. P, Q, R and S are 4 points in the field.

Which of the following statements is **incorrect**?

- A The electric force on a charged particle is stronger when it is located at P than that at R.
- B A positively charged particle released from rest at Q will travel along the electric field line which passes through Q.
- C The electric potential energy of a negatively charged particle at S is higher than that at P.
- D The electric field strength at Q is stronger than that at S.
