

- 24** An alternating power supply of root-mean-square voltage 4.0 V is connected across a resistive load such that the average power dissipated across it is P .

What is the d.c. voltage applied across the same load which will give rise to an average power dissipation of $3P$?

- A** 6.9 V **B** 8.5 V **C** 12 V **D** 17 V

- 25** A piece of wire $WXYZ$ is pivoted freely about a horizontal axis at points W and Z . Section XY
