

|  |    |   |                                                                                                                          |
|--|----|---|--------------------------------------------------------------------------------------------------------------------------|
|  | 27 | D | For a 4-level system, the number of possible transitions is ${}^4C_2 = 6$                                                |
|  | 28 | A | Higher p.d. $\rightarrow$ higher KE $\rightarrow$ max energy of photon is higher $\rightarrow \lambda_{\min}$ is smaller |
|  | 29 | D |                                                                                                                          |
