

	The diagram shows a horizontal wire with a dashed line representing its length. Above the wire, there are three positive charges labeled $+q$ and two negative charges labeled $-q$. A magnetic field vector $\vec{B}$ points vertically upwards from the wire. A dimension line indicates a length of 2 units between the first $+q$ and the first $-q$.
21	B Use $I = evAn$ $An = I/ev$ where An is the number of protons per unit length.
22	C
