

10 **A** At the top of circle, $mg + N = mv^2/r$

At minimum speed, $N = 0$

$$mg = mv^2/r$$

$$v^2 = rg = (1.20)(9.81)$$

$$v = \underline{3.43 \text{ m s}^{-1}}$$

11 **B** **A** is wrong because magnitude of gravitational force GMm/r^2 decreases
