

20 B $|E| = \frac{dV}{dr}$ or gradient of the V-r graph.

From 2V to 6V, $|E| = \frac{\Delta V}{\Delta r}$ is constant. From 6V to 8V, the distance Δr between same potential difference ($\Delta V = 1V$) gets larger, thus $|E|$ decreases.

21 B Current through $L = 60 / 30 = 2.0 \text{ A}$
