

25

Three long vertical wires pass through the corners of an equilateral triangle PQR. They carry equal currents into or out of the paper in the directions shown in the diagram.

[Turn over

Which diagram shows the resultant force F on the wire at Q?

Ans: B

Force due to P is in direction PQ.
Force due to R is in direction QR.

Since currents are the same, the magnitude of the forces are equal.

Resultant force is to the right.
