

period (or frequency) can be taken to be unchanged.

- 27 A** In the initial orientation, the component of B perpendicular to the area is
 $B_{\perp} = 0.15 \times 10^{-3} \times \sin 10^{\circ} = 2.60 \times 10^{-5} \text{ T}$
initial flux linkage, $\Phi_{\text{ini}} = B_{\perp} n A = 2.60 \times 10^{-5} \times 5 \times 0.12 = 1.56 \times 10^{-5} \text{ Wb}$.
The final flux linkage is 0 when the angle becomes 0.
Hence, the change in flux linkage is $1.56 \times 10^{-5} \text{ Wb}$.
