

constant acceleration or free fall.

4 C $\text{Gradient} = \frac{14}{4} \Rightarrow \frac{8}{t_1} = \frac{14}{4}$

$$t_1 = 2.29 \text{ s}$$

change in momentum = area under graph

$$= \frac{1}{2} (2.29)(8) - \frac{1}{2} (4 - 2.29)(6)$$

$$= 4.03 \text{ N s}$$

5 B For equilibrium, the lines of action of three non parallel forces must intersect at a single
