

- 29 The graph shows how the binding energy per nucleon of a nucleus varies with nucleon number A .

Which one of the following statements is **not** true?

- A Nuclei in region Q are more stable than nuclei in region R.
- B Nuclear fusion reactions bring nuclei in region P closer to region Q.
- C Energy is released in nuclear fission reactions from nuclei in region P.
- D The binding energy per nucleon increases most significantly at lower nucleon numbers.
- C Nuclei in region P will undergo nuclear fusion reactions to become more stable heavier nuclei.**

- 30 The following represents a sequence of radioactive decays involving two α
